SYSTEMETS FÖRDELAR

Säkerhet
Enkel installation
Ekonomiskt
Ekologiskt
Tidsbesparande

ANVÄNDNINGSMRÅDEN

Dricksvattensystem (varmt och kallt)
Tryckluft
Värmesystem
Sanitära anläggningar
Brandsläckningssystem (Sprinkler)
Solenergi
VVS-installationer
Industrianläggningar
Sjöfartsindustri

BESKRIVNING

Material : Rostfritt stål AISI 316L (SS 2348)
Sammanfogning: Kalpress, oskiljbar
Tryck (max.) : 16 bar
Drifttemperatur (max.) : 90°C
Godstjocklek : 1,5 (från 15 mm till 54 mm.) - 2 mm. (76,1 & 88,9 & 108mm)
Profil : M
O-ring : Svart EPDM - grön FKM (vänligen kontakta oss vid annat material, temperatur eller vätska)

Hur en koppling ser ut efter pressning:

1.- Kapa röret i rät vinkel. Undvik att använda oljekylda sågar, slipskivor eller skärbrännare.

3.- Kontrollera att O-ringen är rätt placerad.

5.- Montera pressbacken på pressmaskinen och tryck in fästbulten helt.

2.- Grada ut- och insidan av röret för att undvika skador på O-ringen.

4.- Vrid och tryck in röret till det når stoppet i rördelen. Markera rörets insticksdjup som referens. Använd aldrig olja eller fett som smörjmedel. Använd tvål och vatten istället.

6.- Öppna pressbacken, tillse att den passar in i profilen för montering och kontrollera insticksdjupet. Starta därefter pressningen.

Pressrörssystem i rostfritt stål

Modell Nr 1 Muff

Material: SS-2348
